## 500 NEW SHRINERS MANUFACTURED FOR DALLAS

Big Class of Candidates to Qualify in Order to Participate in Festivities in the Texas City.

Dallas, Tex., Jan. 12.—Noble J. C. Phelps, illustrious potentate-elect of Bella Temple, who has been appointed a member of the executive committee, which is directing the work of preparation for the meeting of the imperial council, Ancient Arabic Order Nobles of the Mystic Shrine, predicts that at the next ceremonial session a class of 500 candidates will become Shriners in order to be eligible to participate in the festivities of Shrine week next May. In addition there is to be an out-of-town class, as Noble Phelps and other officers elect of Bella Temple are now preparing for a visit to Amarillo, one of the big Panhandle cities of Texas. Bella Temple has now an enrollment of more than 2,500 nobles, and the 3,000 mark will have been passed by the time of the imperial council meeting. Mr. Phelps is a prominent businessman of Dallas, is identified with practically every organization that has as its aim the upbuilding of the city, and was chairman of the sub-committee which led in the total of subscriptions secured in the chamber of commerce shrine fund campaign when local business men turned over to the executive committee the sum of \$50,000 to be used in defraying the expenses of entertaining visitors.

Mexico, the land of romance and revolution and of twentieth century development and medieval customs, is now occupying the stage of interest from an American standpoint. Realizing this the executive committee is planning several side trips from Dallas and visitors in attendance at the imperial council who are interested will have an opportunity of visiting a city where the Maderos and the Obregons and others who have been prominently identified with affairs in the troubled republic made their headquarters. San Antonio is first of all a Spanish town, differing from other cities of Texas in that respect. It was the home of the old Spanish viceroys, when Texas was ruled by the Habsburgs and Bourbons in Madrid and following the Mexican revolution, was the home of the Mexican governors. It has lost little of the old Spanish atmosphere, the architecture of its buildings, its numerous plazas and its large Spanish speaking population reminding one of a city in old Spain. In addition it is a lively and modern American city with a splendid future. In its vicinity are a dozen missions founded by the early Jesuit and Franciscan fathers, that will appeal to the lover of the past in early day architecture. There are many cities within easy riding distance of Dallas that will be of interest to visitors.

The average increase in production of iron ore by these representative companies was 26.6 per cent. Overland during the first eleven months of the year plus estimates for the month of December, were 100,000 tons of iron ore mined in the United States. Geologic surveys from 28 of the largest iron-mining companies in the United States at the close of the year. As the combined output of these 28 companies represents more than 80 per cent of the iron ore mined in the United States, it is considered that the condition of the industry is fairly well gauged by their production, especially as both the Lake Superior and the Birmingham districts are well represented.

The total exports from the Philippines Islands for the ten months ending with October, were \$16,000,000 as compared with \$23,000,000 for the similar period of the preceding year. The increases are general in all Philippine products except sugar, which shows a decrease from 191,000 to 18,000 tons. The greatest increase was in Manila hemp, the money value of which was increased from \$11,768,100 to \$17,768,300. During the same period the customs revenues increased approximately \$1,700,000, of which 40 per cent came from the United States.

The total exports from the Philippines Islands for the ten months ending with October, were \$16,000,000 as compared with \$23,000,000 for the similar period of the preceding year.

The returns received thus far, which are only approximate figures, are not quite sufficient to justify a definite comparison with the figures for 1912. Red and special hematite constitute about 90 per cent of the output, most of the remaining 10 per cent being divided about equally between limonite, or brown ore, and magnetite, with a very small quantity of siderite, or spathic ore.

In the Lake Superior district the production of iron ore apparently increased in slightly greater proportion than the average for the country at large, the total shipments having increased from 32,783,183 long tons in 1911 to nearly 48,750,600 tons in 1912, but there were very large stocks of ore, amounting to more than 11,000,000 tons, at the mines in the district at the close of 1911 and these stocks may have been depleted in making the record shipments of 1912.

"We will wait and see what Woodrow Wilson will do for us in Mexico," explained O. P. Brown, business agent of the colonies in charge of the headquarters here. The settlers may return to their homes in Mexico or settle in the United States but the collective action of the directing body is deferred.

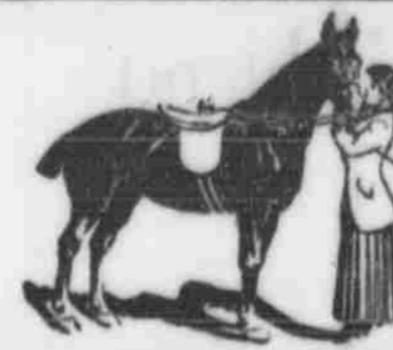

**It Should Be.**

"Radium is constantly giving off particles of itself, yet never gets any larger."

"Gosh! That's the kind of stuff for a bank teller." Louisville Courier Journal.
